

Some changes required in the data base (from Doc's pov)

Highlighted ones are points to be taken into consideration

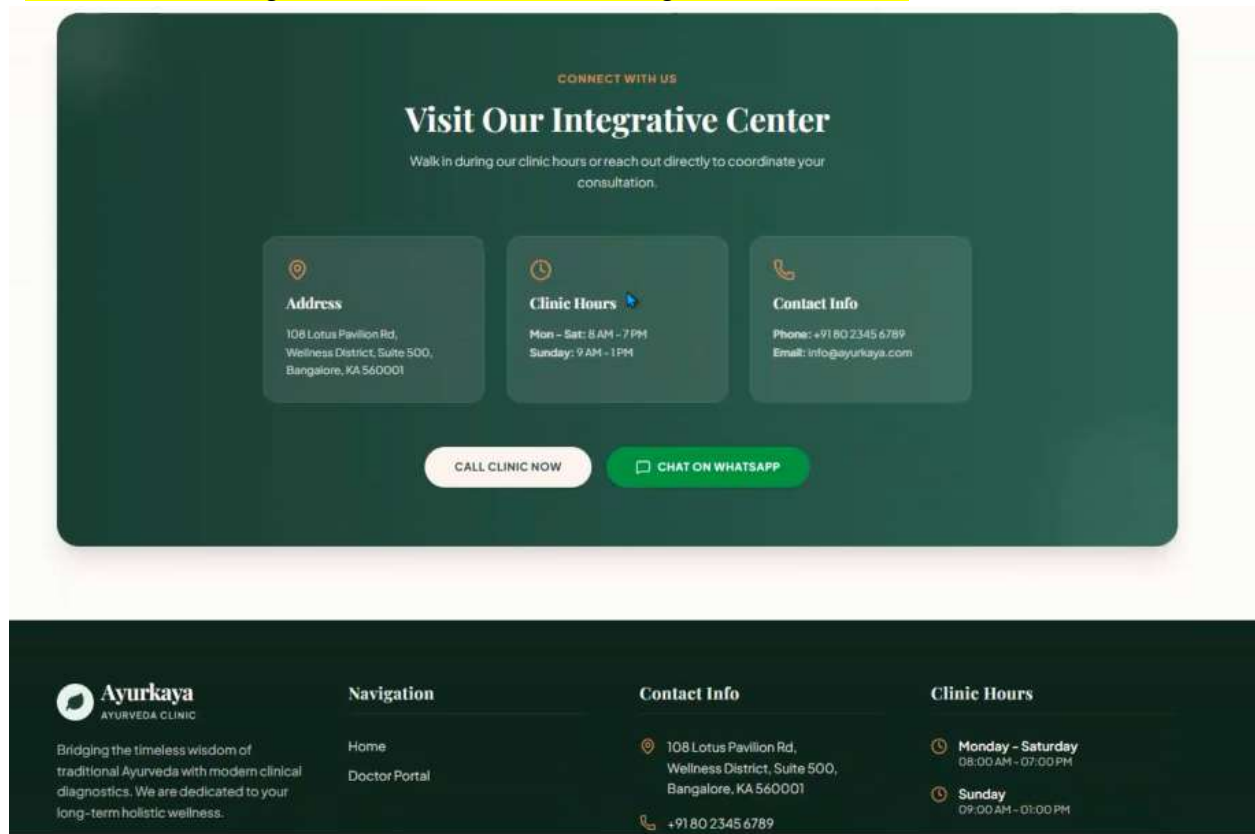

1.Homepage-

Please redesign the home screen as a doctor's dashboard rather than a public-facing website. The home page should prioritize clinical workflow (appointments, patient search, new consultation, follow-up, and quick actions) instead of promotional content.

2. Remove- Complete box

3. We need to change this- recommendations are given below the ss.

8.Diet and lifestyle (also we will add stress here- not above)

Redesign the "Lifestyle & Diet" screen into two logical sections:

Dietary Habits and Lifestyle Habits.

Keep all fields as dropdowns to minimize typing, and include key lifestyle factors relevant to metabolic and chronic diseases. Consider adding an automatically calculated lifestyle score for longitudinal tracking.

Instead of four fields, make this screen a 2-column layout:

- Viruddha Ahara
- Tea/Coffee Intake

Right Column – Lifestyle

- Physical Activity
- Exercise
- Divaswap
- Stress Level
- Screen Time

Left Column – Diet

- Diet Type
